

You can repair your large open gear with no downtime!

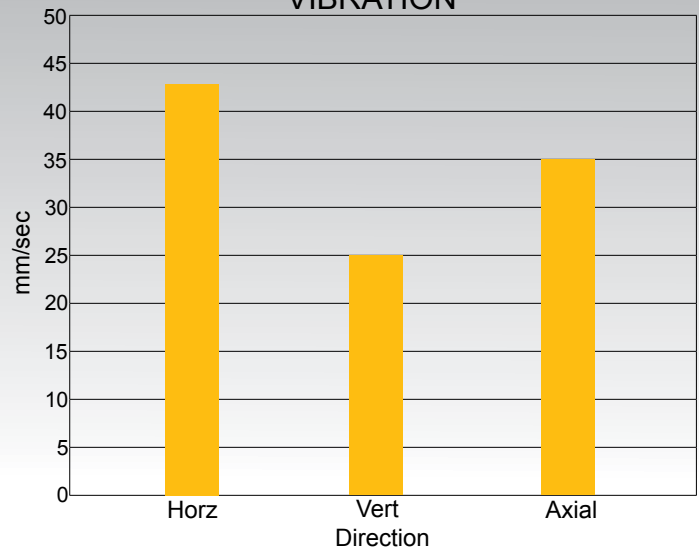

Does your gear

TEMPERATURE

VIBRATION

look like this?

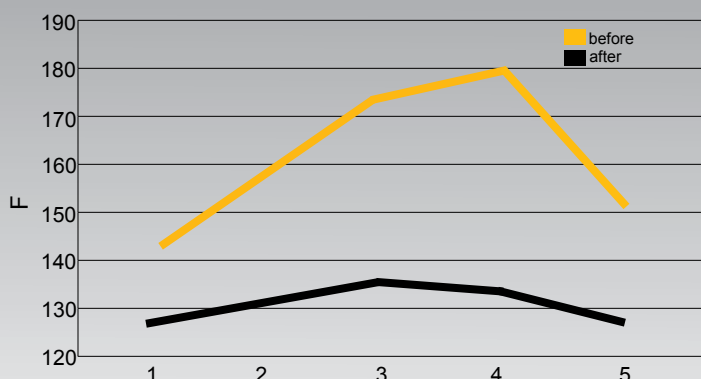

Add years of life to your gear by repairing it now, instead of waiting, and being forced to replace it.

In today's economy it's important to run as efficiently as possible. Taking care of your big investments is imperative - pitting, scuffing and scoring of large open gears can not be ignored. Repairing tooth flanks in a timely manner can reduce your overall lubricant cost, maintenance labor cost, replacement cost and downtime.

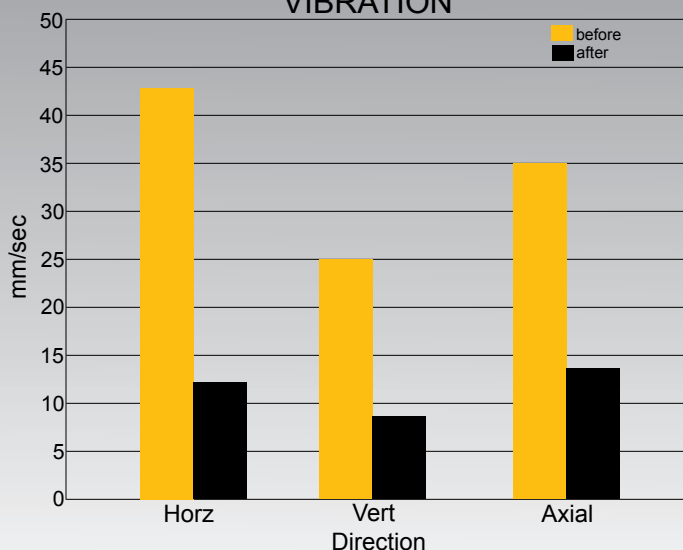

The Klüber Service team has been partnering with companies and OEMs for over 75 years to run more efficiently. Our staff of experts have been helping companies extend their gear life by years!
